

# Architectural Renderings

Last Updated Wednesday, 19 August 2009

{mosloadposition expose\_arc}

Architectural renderings is a process of adding realism to a line drawing, by adding three dimensional qualities such as shadows and variations in shade (values) to be incorporated in black and white - monochromatic or full color illustrations. By having just a rough or finished line drawing, I can make a 3-dimensional rendering depicting a finished building or area in full color with trees and all the landscaping you will have before you break ground. Interior renderings are done with the same quality and professionalism. My work is all done by hand, not by computer, which gives it a fine art look.
